As most organizations across various industries were forced to shift the operations of employees remotely due to the pandemic restrictions, most of the employees said that this provision should continue even after the situation normalises, it added. In addition, the survey found that the hybrid model would be cohesive and allow employers to continue working in an environment they find feasible.

According to the survey, "This will help employees save time and money that can be spent on commuting and also helps companies save office space."

The survey was conducted online in October with over 1,000 respondents across sectors including banking and finance, construction and engineering, education/learning/training, FMCG, hospitality, human resource solutions, IT, ITeS and BPO, logistics, manufacturing, among others.

In addition, the survey found that over 71 percent of employees were of the opinion that the hybrid model would have a positive impact on employee productivity and help them be more resourceful.

Employees said they feel that even in virtual stimulating environments they can achieve effective results and reach their maximum potential without any hassle.

"As restrictions continue to ease, the most important question is whether the hybrid model will be a viable option for industries. Many organizations in different sectors have already decided to continue operating in hybrid systems. Some have even rejected it and some are considering it. As sentiments keep changing across industries, the concerns regarding its applicability and impact on employee productivity remain ambiguous and questionable," said RP Yadav, CMD, Genius Consultants.
